### Purchase Sample:

A customer wants to buy 1 NetWatcher Monitor, 1 Log Server and 10 Clients, then the quotation is  $\$128 + \$128 + \$18 \times 10 = \$436$ .

### Product Module Definitions:

#### NetWatcher Server

Currently there are two kinds of NetWatcher Server programs: **NetWatcher Monitor** and **NetWatcher Log Server**. **Monitor** is a Windows application used to supervise and control all NetWatcher Client enabled computers, supervising instant Windows screens, URL and program access of remote computers, and operating the remote computers directly. **Log Server** is a Windows Service program dedicated to collect and manage screen images, URL and program access log data of all NetWatcher Clients in 24\*7 hours way.

### **NetWatcher Client**

**NetWatcher Client** should be installed at any computers which are planned to be supervised and controlled. It's installed one time. After installation, **NetWatcher Client** is controlled by NetWatcher Monitor for software upgrade and deletion. In order to take supervision effectively, **NetWatcher Client** runs as a Windows system program. It's hard to detect, stop and delete it. Software integrity ensures not only the supervision feasibility but also the enforcement requirement.
